Airline Loyalty Program Data Analysis Presentation

Northern Lights Air (NLA)

Executive Summary

Top 3 Insights

1

Loyalty Signups Net Growth

I found out that the Feb-April 2018 Campaign drove loyalty sign ups from a low net positive of 423 signups all the way to 2,851 sign ups.

2

Signups by Education Level

During my analysis I found that customers holding Bachelor's degrees are the most likely to sign up to the loyalty program.

3

Summer vs Normal Signups

My third insight that I found from my analysis is that the average flights of customers before the summer were actually higher than those who became members in the summer.

Objective

My objective for this analysis was to gain insight into the following points

- What impact did the campaign have on loyalty program memberships (Gross / Net)
- Was the campaign adoption more successful for certain demographics of loyalty members?
- What impact did the campaign have on booked flights during summer?

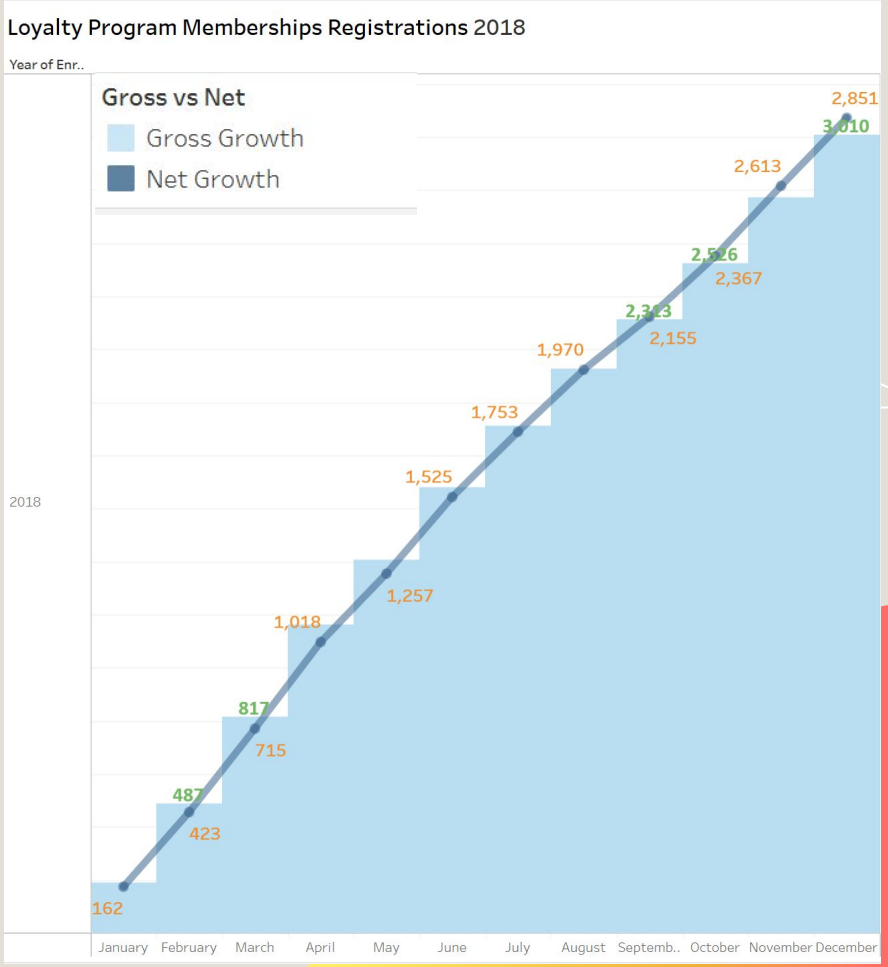
Methodology

I received the data from Maven Analytics and analyzed it using Google's BigQuery SQL, Python (Pandas and Matplot) and visualizing it through Tableau.

Northern Lights Air (NLA)

Key Insight 1 Growth

After the Campaign Net Growth (Orange Numbers) skyrocketed all the way from the start of 423 Net signups all the way to 2,851 signups showcasing how successful the campaign was.



Key Insight 2

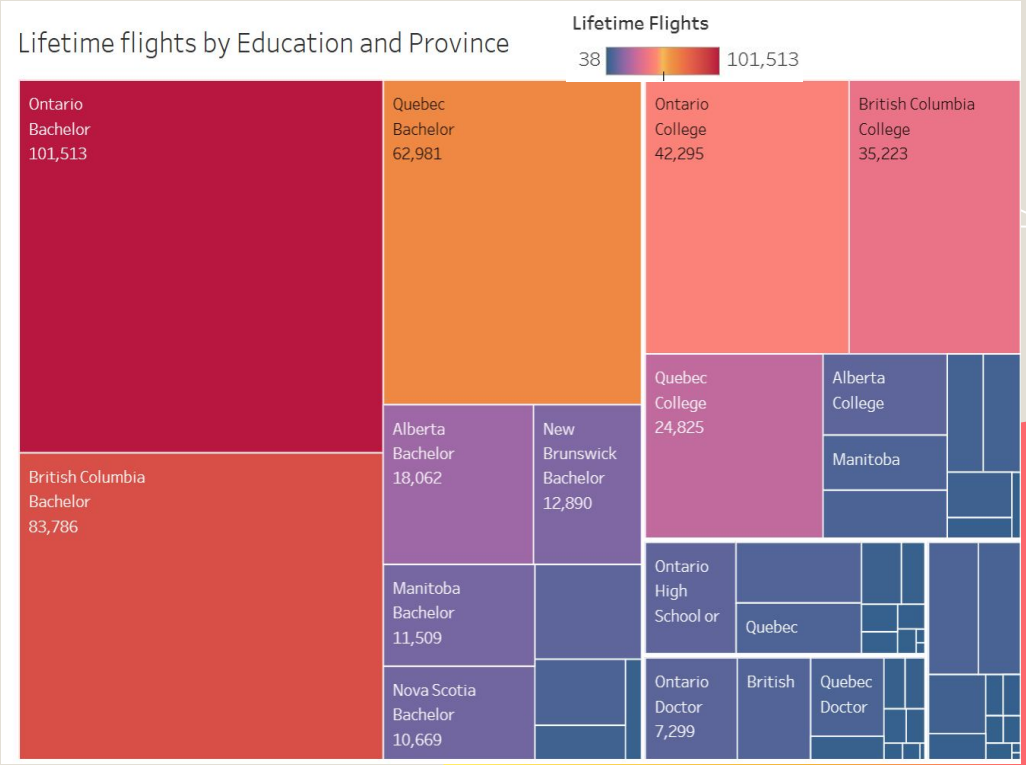
Using a heatmap I identified that through all education levels that customers with Bachelor degrees are the most likely to signup to the loyalty program.

Enrollment Success by Education Level

Education Level	2017	2018
Bachelor	1,540	1,933
College	646	747
Doctor	105	112
High School or Below	113	133
Master	83	85

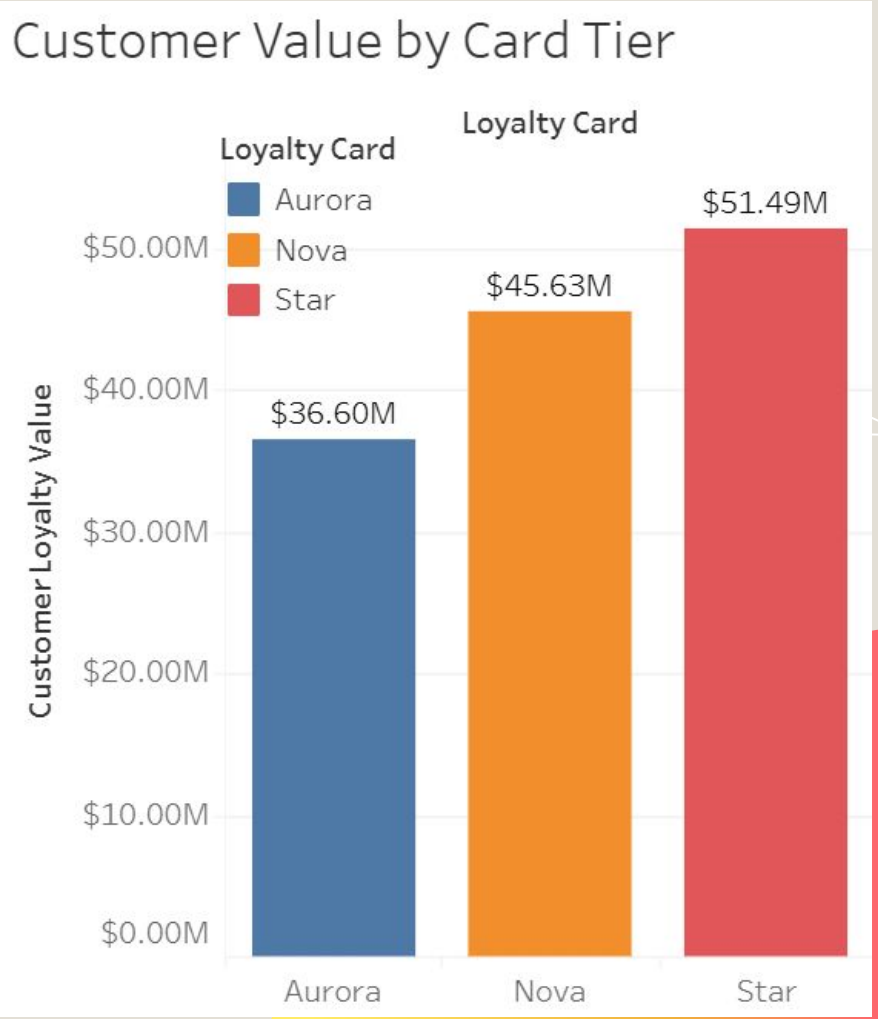
Key Insight 3

Using a treemap we see that when it comes to lifetime customers from Ontario, British Columbia, and Quebec all have Bachelors degrees with the highest lifetime flights.



Additional Insight

Based on further analysis we can also see that our total customer values come the most from our Star tier loyalty card most likely because its the basic tier card.



Recommendations

Based on the information I've gathered we can say that the ad campaign was overwhelmingly successful and my recommendations are the following:

- Run another ad campaign in 2019 with an increased budget to see if customer signups increase compared to 2018
- Try to reach out to more demographics more for example try to run targeted ads towards customers with families.
- Final suggestion is to try to upsell loyalty card tiers by adding more value to the Nova and Aurora cards.

Conclusion & Next Steps

With all that said I think this ad campaign was extremely successful compared to previous years. For the next steps I believe that running another ad campaign with more budget in 2019 would be for the best and see how that goes if it does well we can safely assume the money going to our marketing department is well spent. With that this presentation comes to a close. Have a wonderful day everyone.
